New Apps to Grow Your Business

Downloadable 3G mobile device apps offer you ways to stay organized, productive and innovative as you grow your business. But, there are so many available apps, it's hard to know which are worth the time to download. We've helped you narrow the field by presenting some of the more helpful business apps for the three most popular operating systems.

For Android™

[Hoccer](#)

This File Sharing app allows you to literally throw data like contacts, web addresses, pictures, notes and text messages to co-workers, customers, and friends who catch them (they have to have Hoccer installed, too). Catch a URL and it opens the link in the catcher's web browser, catch a picture and the picture gallery opens, catch a text message and read it, catch a contact and you can view full details and make the call.

[ALOQA](#)

A great app for the business traveler! ALOQA uses GPS to find your location and then provides you details on anything you may need in your locale – restaurants, ATMs, movies, culture. The list is endless, well organized and allows customization. Whatever you may need to find in the city, you can find – complete with phone numbers, websites, maps, and often reviews.

[Google™ Finance](#)

This Finance application provides updated stock information and financial news from a portfolio you create and customize. It combines markets, portfolio and relevant news in one page through three tabs providing easy navigation between the pages.

For BlackBerry®

[Poynt](#)

An indispensable tool for business travel or even a part of your own city you don't know well. Poynt uses GPS to pinpoint where you are then delivers information about anything you might need in your area. This app is highly popular with BlackBerry users because it is extremely useful and easy to use. It allows you to book reservations, find phone numbers and call with one click, get traffic and weather reports, and more.

[Call Time Tracker](#)

Manage and track your billable time easily with Call Time Tracker. As you make a call, a window pops up and asks you to designate the client and project related to the call. It will even assist with emails sent from your phone, tracking the time spent writing to clients. Plus, you get a monthly report sent via email.

[Pageonce Pro](#)

This app lets you keep track of all your life essential information in one secure place. You can monitor your credit card transactions, check your bank account status, automatically add bill due dates and travel itineraries to your calendar, review your investment portfolio and take advantage of its alerts and push notification system.

For Windows® Mobile

[Bing™](#)

Bing calls itself "the decision engine." It encompasses a number of utilities designed to help you make decisions on the go. The home screen displays a 3-by-3 grid of icons -- Categories, Map, Directions, Traffic, Movies, Gas Prices, Collections, Web, and Weather -- along with a search bar for local businesses.

[WorldMate Live](#)

The ultimate travel planning and management service for Windows Mobile, WorldMate offers a wealth of guidance throughout your trip -- itinerary updates, maps and directions to your hotel and meetings, weather forecasts, and more. It is simple to use -- you provide your travel plans, they create your itinerary, automatically synced between your personalized web page and cell phone.
